REMARKS/ARGUMENTS

Reconsideration and withdrawal of the rejections of the application are respectfully requested in view of the remarks herewith. The present amendment is being made to facilitate prosecution of the application.

L STATUS OF THE CLAIMS AND FORMAL MATTERS

Claims 1-61 are pending in this application. Claims 1, 21, 41, and 61, which are independent, are hereby amended. Claim 62 has been canceled without prejudice or disclaimer of subject matter. Support for this amendment is provided throughout the Specification as originally filed.

No new matter has been introduced. It is submitted that these claims, as originally presented, were in full compliance with the requirements of 35 U.S.C. §112. Changes to claims are not made for the purpose of patentability within the meaning of 35 U.S.C. §101, §102, §103, or §112. Rather, these changes are made simply for clarification and to round out the scope of protection to which Applicants are entitled.

II. REJECTIONS UNDER 35 U.S.C. §103(a)

Claims 1-3, 10-13, 30-43, and 50-62 were rejected under 35 U.S.C. §103(a), as allegedly unpatentable over U.S. Patent Application No. 2002/0164149 to Wilkinson (hereinafter, merely "Wilkinson")¹.

-Page 24 of 29-

¹ Applicants note that U.S. Publication No. 2002/0164149 to Wilkinson was filed on September 4, 2001 and published on November 7, 2002 Thus, Wilkinson is 102(c) at and is disqualified under 35 U.S.C. §103(c). However, Applicant note that Wilkinson is a PCT Application that was published on March 14, 2002. Therefore, Applicants assume that the Office Action relies on the PCT application.

Claims 4-9, 24-29, and 44-49 were rejected under 35 U.S.C. §103(a), as allegedly unpatentable over Wilkinson in view of U.S. Patent Application No. 2001/0043784 to Shirata et al. (hereinafter, merely "Shirata").

III. RESPONSE TO REJECTIONS

Claim 1 recites, inter alia:

wherein the second file of the second format includes all of the first data collectively placed in one part of the body and includes all the second data collectively placed in another part of the body, the first data that is collectively placed on the one part of the body of the second file including a plurality of frames of the first data, and

wherein the second file of the second format includes a first metadata file and second metadata file, the first metadata file having metadata in file units and the second metadata file having metadata in frame units. (emphasis added)

Applicants respectfully submit that Willkinson and Shirata, taken either alone or in combination, fails to discloses or renders predictable the above-identified features of claim 1. Firstly, the Office Action (see page 3) relies on paragraphs [0015], [0016], [0115], [0125], [0128], [0129], [0135], [0140], [0147], and Figures 6 and 7 of Wilkinson to reject "wherein the second file of the second format includes all of the first data collectively placed in one part of the body and includes all the second data collectively placed in another part of the body, the first data that is collectively placed on the one part of the body of the second file including a plurality of frames of the first data," as recited in claim 1. Applicants respectfully disagree.

Wilkinson describes three file formats: a MXF format file, a SDI format file, and a SDII format file. Applicants submit that each of the MXF format file, the SDI format file, or the SDII format file of Wilkinson has video data and audio data multiplexed in a frame unit or a filed unit, which are clearly described in the following portion of Wilkinson:

Paragraph [0031] of Wilkinson describes the file body of the MXF format: "Each essence frame is KLV encoded in the file body."

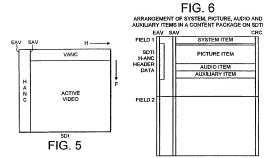

Paragraph [0087] of Wilkinson describes the structure of SDI format: "SDI uses interlaced fields in FIG. 5."

Paragraph [0091] of Wilkinson describes the structure of SDTI format: "FIG. 6 is a schematic diagram of an SDTI-CP frame having two fields."

Applicants submit that each of the formats of Wilkinson include data in a frame or field unit multiplexed in the file. If Wilkinson includes more than one type of data, the more than one type of data will be multiplexed in the file and can not have "all of the first data collectively placed in one part of the body" and "all the second data collectively placed in another part of the body, the first data that is collectively placed on the one part of the body of the second file including a plurality of frames of the first data," as recited in claim 1.

Figure 5 and Figure 6 of Wilkinson, as cited in the Office Action, further illustrate that the data of Wilkinson is multiplexed in either a frame unit or a filed unit. Figure 5 of Wilkinson, as reproduced below, shows an embodiment of the SDI format file: video data is placed in the "active video" section and audio data is placed in the "VANC" section. Figure 6 of Wilkinson, as reproduced below, shows an embodiment of the SDTI format file: every field includes a "picture item" and an "audio item." In contrast, claim 1 recites "wherein the second

file of the second format includes all of the first data collectively placed in one part of the body and includes all the second data collectively placed in another part of the body, the first data that is collectively placed on the one part of the body of the second file including a plurality of frames of the first data."

Secondly, the Office Action (see page 4) relies on paragraphs [0061] and [0062] of Wilkinson to reject "the first metadata file having metadata in file units" of claim 1 and relies on paragraphs [0093] and [0125]-[0127] of Wilkinson to reject "the second metadata file having metadata in frame units" of claim 1. Applicants respectfully disagree. Paragraphs [0061] and [0062] of Wilkinson describe metadata in the MXF format file, while paragraphs [0093] and [0125]-[0127] of Wilkinson describe metadata in the SDI format file or the SDTI format file. Applicants submit that the cited portion by the Office Action describes different file formats. The Office Action applies meta data descriptions in MULTIPLE files to reject "the first metadata file" and "the second metadata file" that are included in one file of one format:

PATENT Attorney Docket No. 450100-04756

U.S. Apln. No. 10/665,090 Reply to Office Action dated March 15, 2010

"the second file of the second format," as recited in claim 1. It is unobvious for a person of

ordinary skill in the art to mix features in different file formats in order to render predictable the

above-identified features of claim 1.

For reasons similar to, or somewhat similar to, those described above with regard

to independent claim 1, claims 21, 41, and 61 are patentable.

As nothing in the prior art cited in the Office Action cures the above-identified

deficiencies. Applicants respectfully request reconsideration and withdrawal of the rejections.

IV. DEPENDENT CLAIMS

Each of the other claims in this application is dependent on an independent claim

discussed above, and is therefore believed patentable for at least the same reasons presented for

the independent claim upon which it depends. As nothing in the prior art cited in the Office

Action cures the above-identified deficiencies, Applicants respectfully request reconsideration

and withdrawal of the rejections. As each dependent claim is also deemed to define an

additional aspect of the invention, however, the individual reconsideration of the patentability of

each on its own merits is respectfully requested.

CONCLUSION

Because Applicants maintain that all claims are allowable for at least the reasons

presented hereinabove, in the interests of brevity, this response does not comment on each and

every comment made by the Examiner in the Office Action. This should not be taken as
